

Career Exploration with Transfr: Helping Tomorrow's Workforce Find Career Pathways

Transfr's Career Exploration offers hands-on simulations showcasing daily tasks in a variety of different careers. Through short, fun experiences, students and job seekers increase their understanding of job options, sampling vital job tasks in multiple industries. Ultimately, VR career exploration aims to help users get on their own personal pathways to well-paying jobs in high-demand fields.

All simulations were developed using insights and experiences from subject matter experts with deep background knowledge of each specialty. Short, exciting simulations are designed to be engaging and fun. The specialties themselves were chosen after intense market research including projected job openings, potential for development along a career trajectory, and salary increases over time.

Use Transfr to help students and job seekers understand career options and pick the right path for them

Employers

Build a local talent pipeline, working with K-12, higher education, local government, and communities to build career pathways that scale and quickly deliver qualified applicants to fill a variety of open roles in your area.

Educators

Offer learners a way to sample a variety of career options they might not otherwise have considered. Enable your students to explore careers and different occupations they may not have know about in a relevant and engaging way.

Explorers

Engage learners in their career journeys by doing, not just watching and listening. Students and job seekers can see how an EMT helps a patient at a car crash, restoring power to a hospital after a thunderstorm, or how to build a 5G telecommunications tower.

Learn more about

Transfr here!

Explore 35 occupations (and more added all the time), including:

- Health Science: Registered Nurse, Surgical Technologist, EMT
- Manufacturing: Welder, Semiconductor Manufacturing Technician
- Architecture & Construction: Broadband Technician, Lineworker, Electrician, Solar Technician
- Information Technology: Network Technician

How Transfr's VR Career Exploration Works

VR Career Exploration is about more than just showing off occupations. Fast, fun simulations are designed to give students and job seekers a genuine understanding of the daily tasks and expectations of a variety of jobs. Equipped with these experiences and supported by instructors and counselors, they're better prepared to make important decisions about their future careers.

Instructors and other professionals are also better equipped to help students and career seekers, thanks to the Career Exploration Dashboard. This robust set of tools shows which simulations students have completed (and which they didn't) as well as how they felt about them. This information can prove invaluable when helping students and job seekers create their career plans.

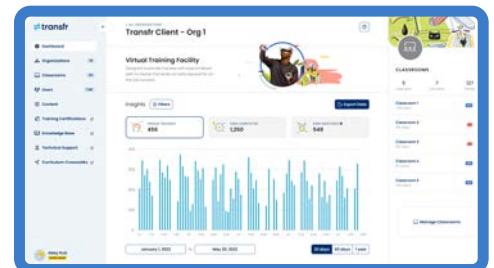

Virtual Coaches

Virtual coaches guide learners through specific scenarios in each career specialty with tools and environments that replicate work settings without expensive equipment or specialized classrooms.

Realistic tasks

Short, engaging sims give students a look at daily tasks of each career, backed by experiences from seasoned industry professionals. Students and job seekers can learn which jobs are right for them – and which ones aren't!

Insights Dashboard

Transfr dashboards provide educators with a group- and individual-level view into progress, engagement, and interest. See what students like and don't like – get them on the right career pathway!
